## Web Design

Clarity's design team works on all types of design. From mobile applications, responsive websites, applications, usability workflows, to logos, branding, print and video media. Your site or application design is almost always a user's first impression and is critical to user engagement. Let Clarity show you what a high-performance design looks like.

## eCommerce

Clarity has deployed hundreds of custom eCommerce solutions from small to B2B, or tens to millions of SKUs. Clarity eCommerce™ ensures we can create a solution to adapt and enhance your goals, rather than have you change your business to an off-the-shelf cart. Let us demo the last eCommerce solution you'll ever have to buy.

## Web Hosting

For those clients that want faster service, 24x7 monitoring, custom back-ups and site caching, Clarity offers our own software and website hosting. SSAE16 and ISO certified, top-of-the-line servers and datacenters are just a few benefits. We can build a custom hosting solution to maximize performance while minimizing spend.

## Web Development

Clarity hires only the brightest developers, who all work out of the same office in Austin, Texas. This promotes the sharing and using the latest and most advanced technologies and development best practices. No matter if you need ASP.net, PHP, SQL, HTML5, CSS3, AngularJS, or more specialized application coding experience, Clarity has you covered.

## Integrations

Clarity Connect™, our own integration platform, allows us to integrate any of our clients' needs. From simple shipping integrations to custom ERP, CRM, EMR, database integrations like NetSuite, SAP, Oracle, Salesforce, Dynamics GP/AX/NAV/CRM, and many more, Clarity has done over 3,000 integrations. Supports ETL, Hub, Bus, API, Direct, EDI, HIPPA, etc.
