

eCommerce TechSheet

Our Enterprise B2B eCommerce brings together a revolutionary combination of bleeding edge technologies to maximize the performance of your complex online storefront.

Check out below just some of the reasons our *blow your socks off* platform does what it does!

The core of the magic comes from Microsoft's lightning quick and powerfully secure .Net 4.5 Framework

AngularJS is a robust JavaScript framework that allows all of our eCommerce elements to talk to each other seamlessly with minimal setup cost.

Combining modern web technologies with HTML5 mark-up and CSS3 styling lets your pages look great, get crawled effectively, and keeps your site lite for quick page loads on any device.

jQuery makes cross-browser compatibility a breeze and enables intense interactivity across your entire user experience.

Kendo UI provides meticulous data controls that can organize tons of data into a consumable format so new visitors become your customers.

DotNetNuke, the leading Microsoft.Net CMS delivers all of these technologies in a rich web experience while allow you to control everthing.

Insanely useful server controls do the heavy lifting to massage your data into a palettable B2B eCommerce storefront that works.
